O'HARE AIRPORT PASSENGER SURVEY

GENERAL AND STATISTICAL DATA

Weekday - October 1964

The survey data were gathered from questionnaires distributed aboard to all passengers and crews arriving and departing O'Hare Airport on the survey date.

The date of the survey was considered typical, although convention breaks resulted in a rather heavy departure volume from the Central Zone. This type of situation is not unusual and it is our opinion that the travel patterns denoted in the survey are representative.

Approximately 36,700 questionnaire cards were returned with usable information. This was 98% of the total number of completed cards returned, and represented a 60% sample of O'Hare Airport usage on the survey date.

Other agencies cooperating in the survey were Chicago Area Transportation Study, Chicago Transit Authority, Department of Aviation, and all passenger airlines serving O'Hare Airport.

Notes: The Central Zone data apply to the area bounded by Chicago Avenue on the north, Roosevelt Road on the south, Halsted Street on the west, and Lake Michigan on the east.

The Chicago Area data apply to Cook, Lake, DuPage, Kane, and Will Counties, Illinois, and Lake County Indiana.

Departure volumes from the Central Zone were high because of large convention breaks on the survey date.

These data include 169 passengers using shuttle planes or helicopters to or from the Airport.

Data for passengers to or from outside the Chicago Area, total 2,121, are not included in this statement.
